ERP Built for Fencing Distributors & Manufacturers

Pre-configured solutions from 10+ fencing implementations

Stop explaining your business to ERP vendors. i-Tech has already built the configurations fencing companies need, from pipe cutting inventory to delivery scheduling, based on real implementations with distributors and manufacturers like you.

Fencing-Specific Challenges We Solve

The Challenge	Our Solution
Pipe Cutting Inventory: Cut a 24' pipe into 16' + 8' pieces, system still shows 24' pipe. No visibility into actual sizes.	**Disassembly tracking** Track material transformations accurately with proper cost allocation. Know exactly what sizes you have after cutting.
Delivery Scheduling Chaos Paper-based schedules, no truck capacity visibility, last-minute changes cascade through routes.	**Custom shipment calendar** Track material transformations accurately with proper cost allocation. Know exactly what sizes you have after cutting.
Inventory Theft & Shrinkage Product leaves the yard with no audit trail. Pick lists can be deleted after the fact.	**Permanent audit trails** Automatic pick list tracking creates records that can't be deleted. Know who picked what, and when
Multi-Location Inventory Chaos Sales can't see real-time inventory across locations. Indoor vs. outdoor yard tracking is manual.	**Custom inventory inquiries** See all inventory across all locations at once, by warehouse AND specific location. One screen, not item-by-item lookups.

Why Fencing Companies Choose i-Tech

- 10+ fencing implementations, pre-built configurations ready to deploy
- Unlimited user licensing so you can add users as you grow, no per-seat surprises
- Focused go-live with agile implementation and hands-on access

"We feel we can add a warehouse or branch in a 30-day window or shorter, because we have the financial backbone all set up and ready to go."

Keith Ford

President, Eagle Fence Distributing
